

HEALTHCARE IN FOCUS: ANALYSING HOSPITAL PERFORMANCE AND OPPORTUNITIES

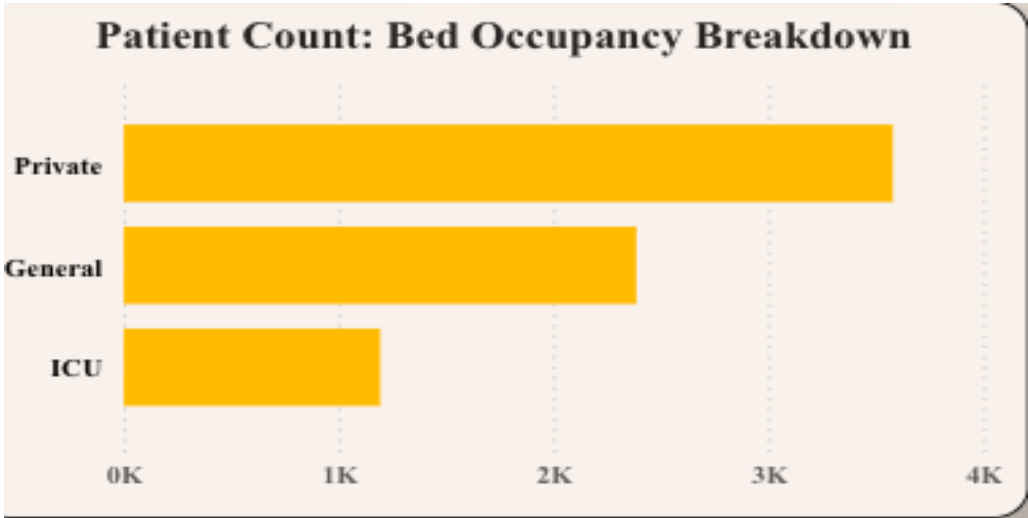

A ROADMAP FOR ENHANCED HEALTHCARE DELIVERY

INTRODUCTION

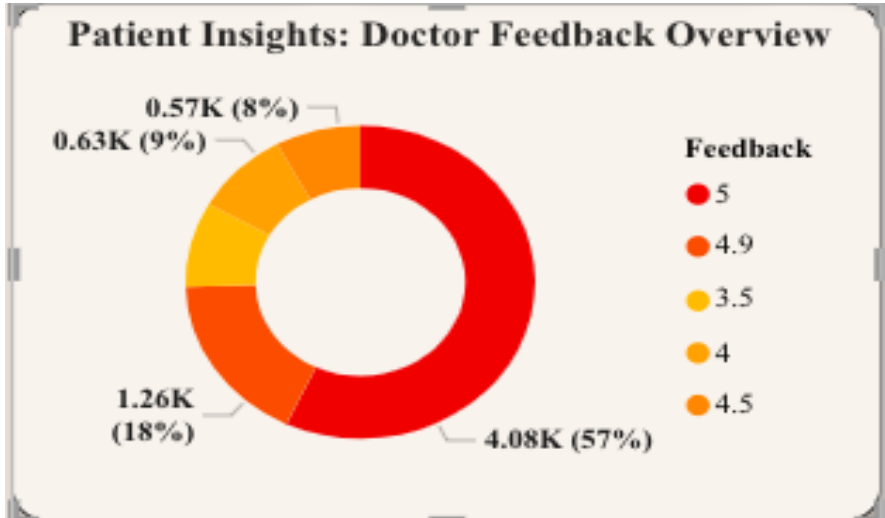

- **Transforming Care:** Our patient information dashboard revolutionizes personalized medicine.
- **Real-Time Insights:** Centralizes data for comprehensive patient profiles at a glance.
- **Informed Decisions:** Visualizes key metrics for timely, impactful clinical decisions.
- **Empowering Patients:** Gives patients access to their health information for proactive management.
- **Seamless Integration:** Enhances workflows and collaboration with existing systems.
- **Data-Driven Alerts:** Identifies trends and flags potential issues early.
- **Elevating Standards:** This presentation highlights how our dashboard sets a new benchmark in patient-centric care.

PATIENT STATISTICS AND FEEDBACK OVERVIEW

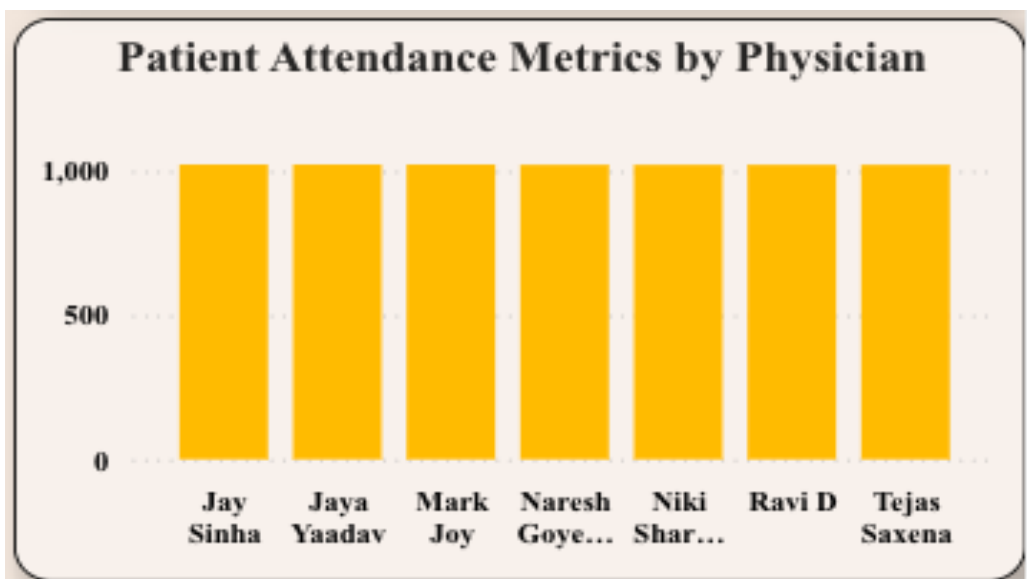

The chart displays the distribution of patient admissions across three key care categories: Intensive Care Unit (ICU), Private Rooms, and General Wards. Notably, the Private category stands out as the leading segment, highlighting important trends in patient preferences and the evolving dynamics of healthcare.

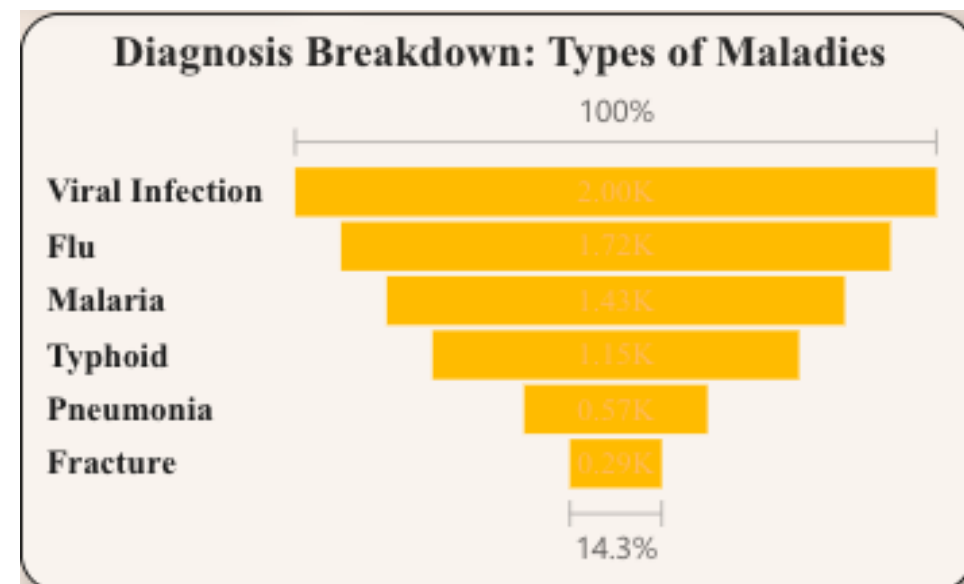

The doughnut chart illustrates patient feedback for doctors, showing that the majority (57%) rated their experience as 5, while around 8% gave a rating of 3.5.

PATIENT ATTENDANCE AND DIAGNOSIS BREAKDOWN OVERVIEW

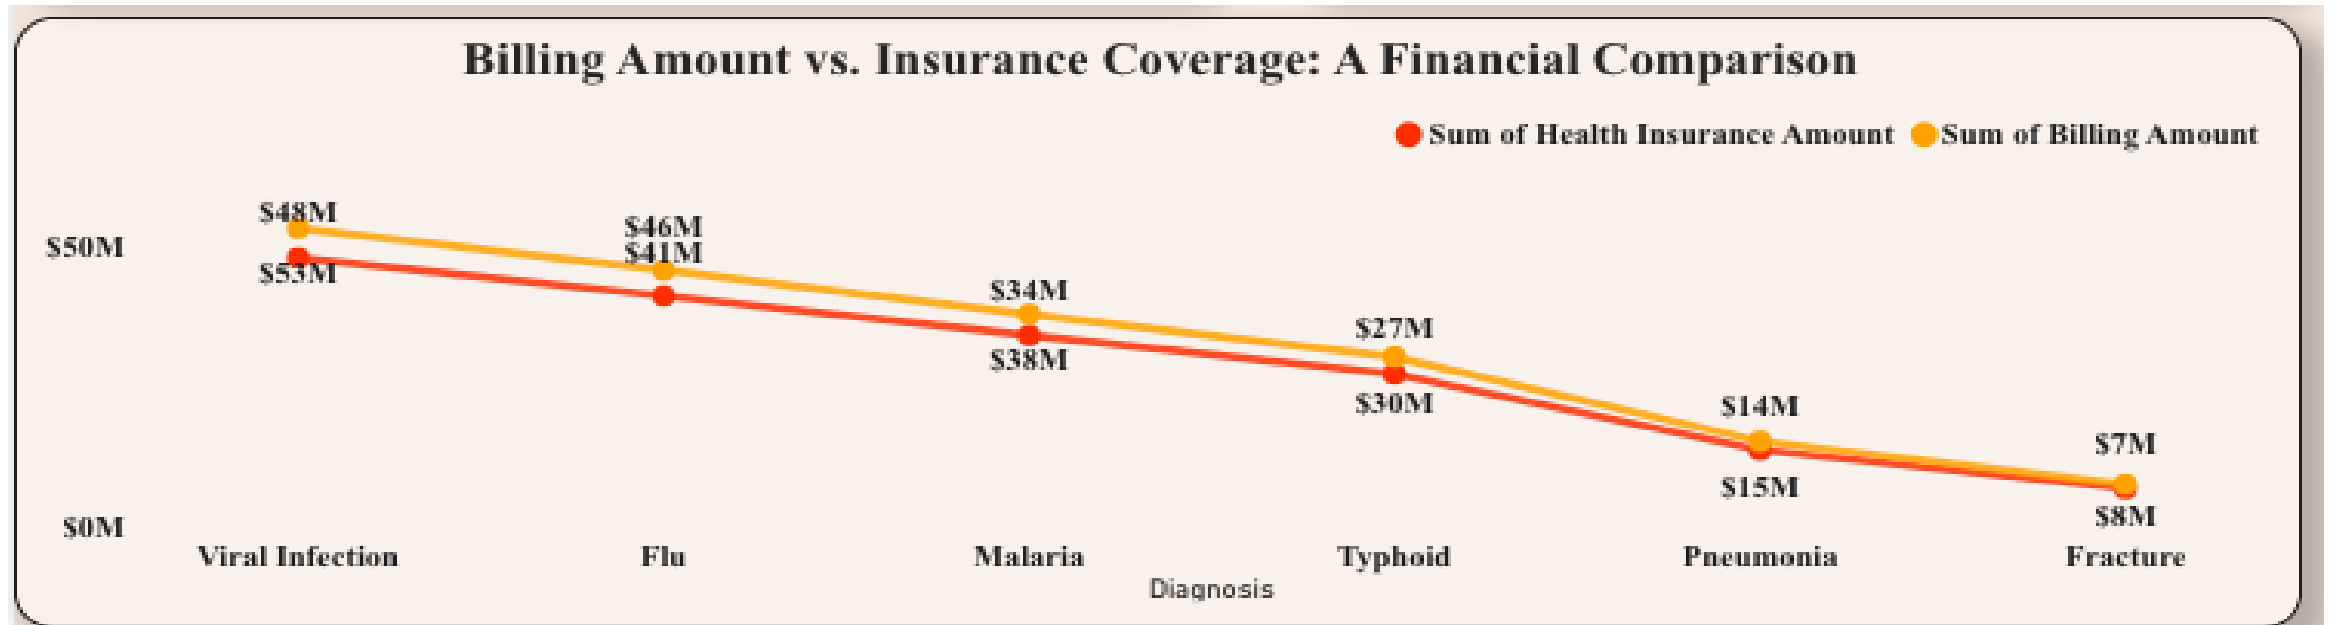

The bar graph highlights patient attendance metrics per physician, revealing that an impressive seven doctors have each attended nearly 1,000 patients.

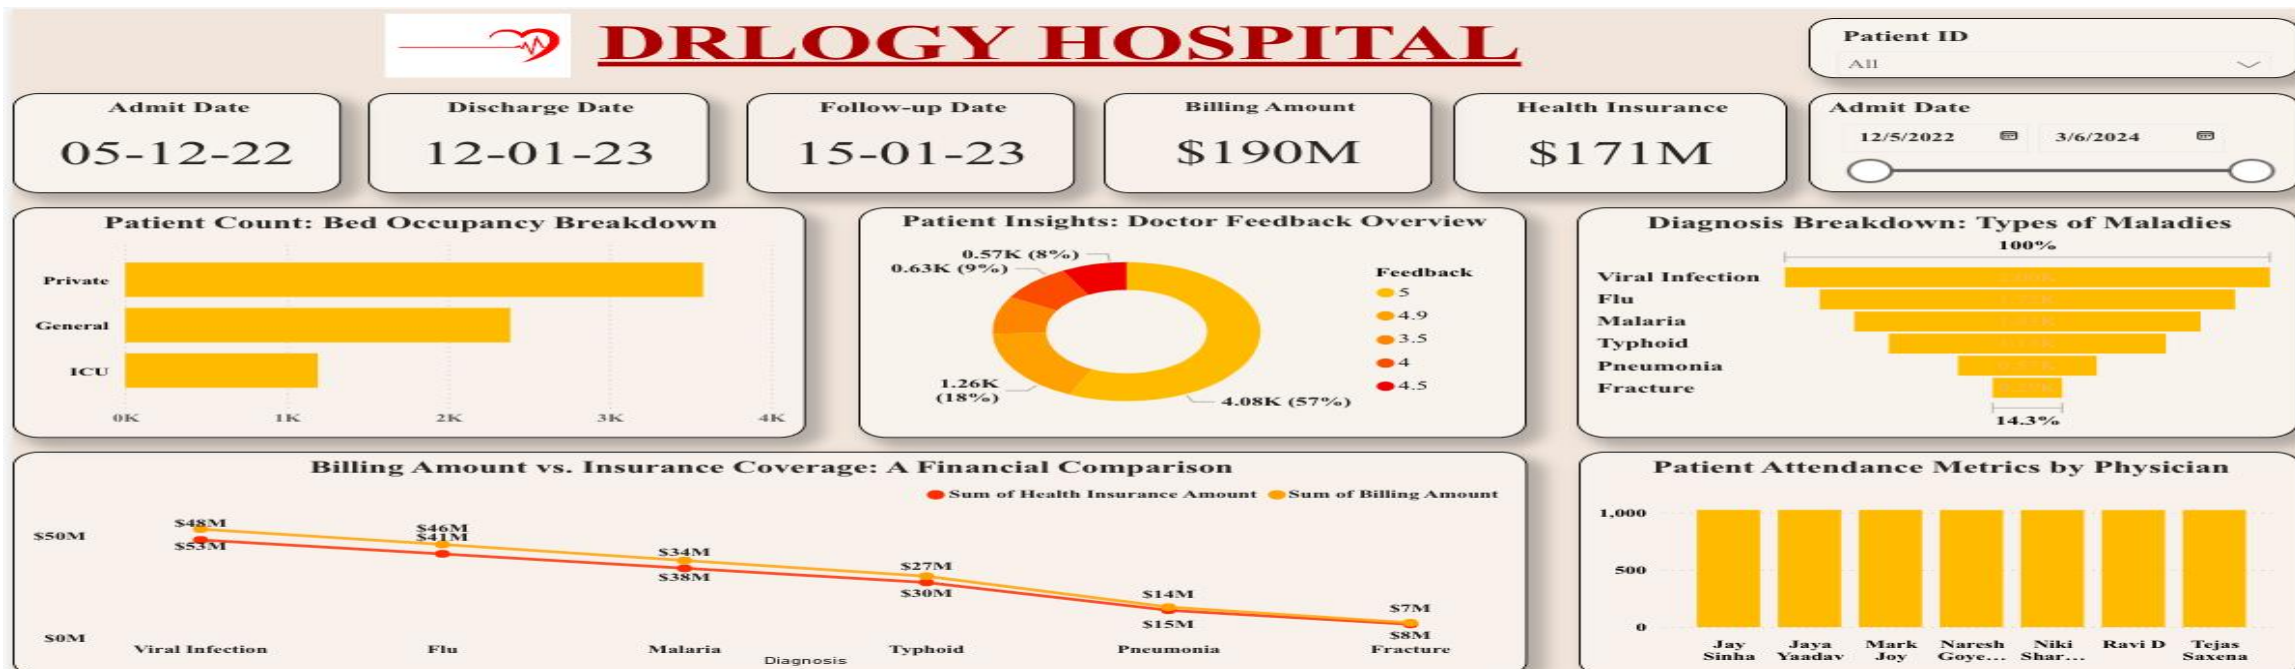

The funnel chart illustrates the diagnosis breakdown by types of maladies treated at the hospital, with viral infections leading the list and fractures ranking the lowest, comprising just 14.7%

BILLING VS INSURANCE COVERAGE: A FINANCIAL COMPARISON

The line graph indicates that most diagnoses were covered by insurance, with some instances of over-insured cases. However, flu stands out as an outlier where the billing amount exceeds the insured coverage.

PATIENT CARE INSIGHTS

- **Insights:**
- **Patient Admissions:** Private rooms preferred; ICU and General Wards have smaller shares.
- **Diagnosis Breakdown:** Viral infections lead; fractures are only 14.7%.
- **Insurance vs Billing:** Most diagnoses covered, but flu exceeds insurance.
- **Improvement Areas:**
- **Admissions:** Optimize ICU, General Ward, and private room use.
- **Workload:** Balance physician workload to avoid burnout.
- **Diagnosis:** Address viral infections and enhance trauma care.
- **Insurance:** Adjust coverage for flu and improve patient education.
